

Offering Unquestionable Proof of the Truth

DeepTruth's patented certification and verification technologies are the new standard for protecting media authenticity and credibility with digital DNA fingerprinting and chain of custody solutions.

- Chain of Custody
- Claim Authentication
- Fraud Prevention
- Reputation Security

The patented DeepTruth System provides unmatched protection by creating unalterable certified and verified media during recording, not after.

The DeepTruth System

Establish Credibility

All media is mapped and registered in real-time with digital fingerprints at 30 times per second and simultaneously layered with over 80 dimensions of electronic metadata.

Maintain Integrity

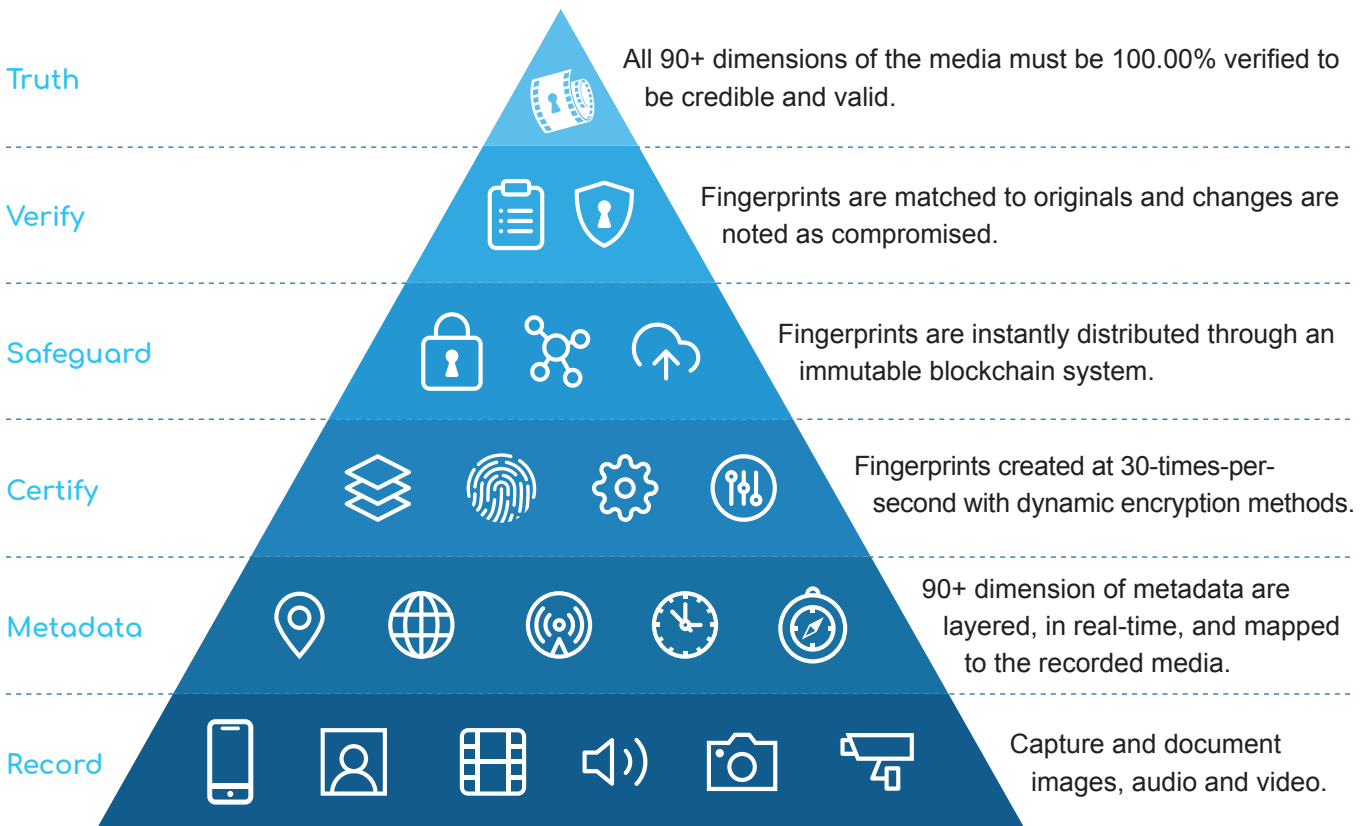

Digital fingerprints are recorded and preserved using impenetrable blockchain technology – rendering it impossible to alter recordings created with DeepTruth.

Validate Authenticity

DeepTruth doesn't just tell you a recording is verified, it shows you – frame-by-frame. Any attempt to edit a single pixel, modify a sound bite or changes to the metadata is identified and flagged it immediately.

The DeepTruth Hierarchy

DeepTruth media certification technology works by charting digital fingerprints in every frame of a recording. Those fingerprints are mapped with over 90 dimensions of localized, regional and global metadata computations. The fingerprints are preserved in real-time using a distributed blockchain environment. To prove authenticity, DeepTruth's patented verification system requires absolute perfection. If so much as a single pixel or piece of metadata has been altered, DeepTruth immediately spotlights compromised areas.

White Label Solution

Insert DeepTruth's technologies into your mobile app(s) to establish new levels of confidence in sharing information with your clients, customers and partners.

DeepTruth's certification and verification systems provide credibility and protect the integrity of your captured media.

Embedded Solution

Insert DeepTruth's technologies into your mobile app(s) to establish new levels of confidence in sharing information with your clients, customers and partners.

DeepTruth's certification and verification systems provide credibility and protect the integrity of your captured media.

System Solution

Legacy systems can utilize and leverage DeepTruth's solutions by taking audio and images from internal systems and certify their authenticity.

Body cameras, surveillance audio and corporate security systems immediately benefit any organization ready to add an extra layer of credibility to recordings.
